

My environment

The screenshot displays a VS Code Jupyter Notebook interface. The top section shows a table of correlation coefficients for various features. Below this, the notebook contains several code cells. The first cell defines `corr_no_diag` as a copy of `corr_matrix` with the diagonal filled with zeros. The second cell defines `max_corr_index` by finding the maximum value in each row of `corr_no_diag` and returning the corresponding indices. The third cell uses these indices to select features from a `features` array, specifically 'loudness' and 'energy'. The bottom section shows the terminal output of a `pip list` command, listing installed packages and their versions.

	instrumentalness	liveness	valence	tempo
instrumentalness	-0.002267	0.023818	-0.154309	-0.107959
acousticness	-0.028878	-0.545886	-0.371602	0.024945
liveness	-0.127002	0.163709	0.081927	0.059343
valence	0.333729	0.149710	0.049510	0.064701
tempo	-0.184575	0.151545	0.096706	0.032729

```
corr_no_diag = corr_matrix.copy()
np.fill_diagonal(corr_no_diag, 0)

max_corr_index = np.unravel_index(
    np.argmax(corr_no_diag),
    corr_no_diag.shape
)
max_corr_index

(np.int64(2), np.int64(1))

features[max_corr_index[0]], features[max_corr_index[1]]

('loudness', 'energy')

corr_no_diag[max_corr_index]
